

CUSTOM FORMULAS JUST FOR ERECTILE DYSFUNCTION

Scott's Pharmacy can create a custom formula for you that is guaranteed to improve your erectile dysfunction almost instantaneously.

Remember the main cause of erectile dysfunction is LACK of BLOOD FLOW. Our custom formulas are designed to increase blood flow directly to the penis resulting in sustained erections.

Our custom formulas typically contain 3 medications commonly known as Trimix. They are **Papaverine, Phentolamine, & Prostaglandin E₁**.

When combined all of these medications act as powerful vasodilators resulting in increased blood flow to the penis.

HOW DO YOU USE THIS SPECIAL MEDICATION?

- 1 Wipe the top of the vial and the side of the penis where you will inject the medication
- 2 Withdraw the correct amount of medication from the vial (usually 0.2-0.3 ml)
- 3 Inject the medicine into the side of the penis as shown in the diagram
- 4 Discard the needle in an appropriate container

↓ FACTS

- More than 30 million American men suffer with some form of erectile dysfunction. The most common type of erectile dysfunction is the inability to obtain or sustain an erection firm enough to engage in sexual intercourse.
- The fundamental cause of erectile dysfunction is lack of blood flow to the penis, but nerve damage, and medications may also be causes of erectile dysfunction.
- While medications can cause erectile dysfunction it is important to remember that medical conditions such as high blood pressure, diabetes, and high cholesterol are also MAJOR causes of erectile dysfunction and improving these conditions does help improve erectile dysfunction.

STANDARD THERAPIES

There are medications on the market that are designed to improve erectile dysfunction. Medications such as Viagra®, Levitra®, and Cialis®, are known as phosphodiesterase inhibitors and are designed to improve blood flow to the penis.

While these medications are effective they are not effective for everyone. Men who have extreme nerve damage, severe high blood pressure, some types of paralysis, and other conditions may not get as much benefit.

These medications may also have drug interactions with some medications that are used for the heart.

Lastly, these medications can be expensive, costing anywhere from \$30-\$40 per dose.

OUR PROGRAM

Scott's Pharmacy has designed a new men's health program that is designed to help you feel your best and to ultimately help you have better sex and have it more often.

We work with you and your physician to get to the root cause of your erectile issues and then we customize a therapy specifically for you that is guaranteed to improve your erectile dysfunction almost IMMEDIATELY.

IS IT MY HORMONES?

Did you know a man's hormones can become unbalanced much like a woman's during menopause? That's right. Andropause or "low T" is a condition that occurs when a man's testosterone is no longer in a healthy range. Low testosterone, DHEA, and imbalances in estrogen can result in symptoms such as:

- Fatigue
- Lack of Concentration
- Depressive Moods
- Heart Disease
- ERECTILE DYSFUNCTION (both lack of desire & inability to perform)

Scott's Pharmacy can work with your physician to create a custom formula to help balance your hormones and improve your sexual experience.
